

**PREANESTHETIC BLOODWORK RELEASE FORM - for animals less than 8 years old**

Owners of animals less than 8 years of age have the option of having PREANESTHETIC BLOODWORK performed on their pet prior to any procedure involving anesthesia. This bloodwork would reveal any underlying liver and/or kidney abnormalities which can be seen in young pets that might cause problems with anesthesia. If the blood test results are abnormal, the doctor may elect to change the type of anesthetic drugs selected for your pet in order to minimize anesthetic complications.

The price for the recommended bloodwork is \$65. (Bloodwork is REQUIRED in animals over 8 years of age.) Please initial one response below:

YES.....please perform the bloodwork for the \$65 additional cost \_\_\_\_\_

NO.....I do not wish to have bloodwork performed \_\_\_\_\_

**HOME AGAIN MICROCHIP**

All owners have the option of having a HOME AGAIN MICROCHIP placed under pet's skin for identification purposes. Shelters and veterinary hospitals routinely scan for these chips when presented with a lost animal. The microchip can be placed when the animal is not anesthetized but, because it is a rather large needle, we recommend placing it while the animal is asleep. The cost is \$59.50 for the microchip, plus a lifelong registration fee of \$17.50 to the company. Initial below:

YES.....please place the microchip at surgery \_\_\_\_\_

NO.....I do not want a microchip placed \_\_\_\_\_
