

DENTAL/SURGICAL RELEASE FORM (Animals 8 Years & Older)

Date: _____
Client's Name: _____
Patient's Name: _____
Contact Number: _____

For animals 8 years of age and older, we require PREANESTHETIC BLOODWORK to be performed on their pet prior to any procedure involving anesthesia. This bloodwork will reveal any underlying liver and/or kidney abnormalities which can cause problems with anesthesia. If the blood test results are abnormal, the doctor may elect to change the type of anesthetic drugs selected for your pet in order to minimize anesthetic complications.

The price for the required bloodwork is \$78.50. Please initial below:

YES, I understand that this bloodwork is required for an animal 8 years of age and older and will be performed at a cost of \$78.50 _____

All owners have the option of having a DATAMARS MICROCHIP placed under their pet's skin for identification purposes. Shelters and veterinary hospitals routinely scan for these chips when presented with a lost animal. The microchip can be placed when the animal is not anesthetized but, because a rather large needle is used, we recommend placing it while the animal is asleep. The discounted cost for the microchip when done at the time of surgery or dentistry is \$58.00. The lifelong registration fee is included in this price. Initial below:

YES, please place the microchip at surgery _____

NO, I do not want a microchip placed _____
